PROFILE

Full-stack engineer with 2+ years shipping production systems end-to-end, with AI as a daily force-multiplier — not prompt-and-pray. I build with Claude Code every day: spec and architecture first, multi-file changes and refactors through scoped sub-agents and MCP integrations, tests as the ground truth to catch the model, and a hostile self-review of every diff before it ships. Shipped a multi-tenant SaaS solo in 2 weeks (Node.js / TypeScript, Fastify, PostgreSQL with row-level security) and a real-time auction platform handling concurrent live bidding over WebSockets (MongoDB + PostgreSQL). Strong across React / Next.js, Node.js & Python, MongoDB & SQL, REST, and testing — and fully accountable for what I ship.

TECHNICAL SKILLS AND STRENGTHS

- React, Next.js, TypeScript, JavaScript, Tailwind CSS
- Node.js (Fastify, Express), Python, REST & GraphQL APIs
- MongoDB, MySQL, PostgreSQL (row-level security), Redis
- Prisma, Drizzle, WebSockets / Socket.IO, queues (BullMQ)
- Git, CI/CD (GitHub Actions), Docker, AWS (S3), Turborepo
- Testing: Vitest, Jest, Playwright (unit & integration)
- Claude Code daily: custom skills, sub-agents, MCP servers, plan-mode specs
- Prompt engineering: task decomposition, context curation, catching wrong output
- Multi-agent orchestration, parallel specialist agents, cost-aware model routing
- LLM features: tool calling, RAG (Anthropic Claude, Google Gemini)
- Read-back verification / AI evaluation; tests as ground truth
- Security: per-tenant RLS, HMAC-verified & idempotent webhooks, rate limiting

EXPERIENCE

Aumiqx Technologies

Software Engineer — Full-Stack & AI

Chandigarh / Remote

Mar 2024 – Present

- Build with **Claude Code every day** as my primary delivery tool — multi-file features, refactors, tests, and reviews — across React / Next.js front ends and Node.js / TypeScript + Python back ends; turn ambiguous requirements into spec'd, tested, production work and own every line that ships.
- **Shipped SalesClawd solo in 2 weeks** — a multi-tenant SaaS on Node.js / TypeScript + Fastify with 11 background queue workers on BullMQ / Redis, PostgreSQL with per-tenant row-level security, and a Next.js / React frontend in a Turborepo monorepo.
- Built an integration layer across **18 third-party platforms** (WordPress, Shopify, Google Search Console, Analytics, Calendar, email providers) behind a gateway with retries, exponential backoff, circuit breaker, and rate limiting; designed an 8-stage async pipeline with read-back verification and a 7-day rollback window — destructive actions always gated behind human approval.
- Integrated AI end-to-end — cost-aware model routing, multi-agent orchestration, and a fan-out worker running 10 parallel specialist processes per job — with structured logging, audit trails, and observability (Sentry, Prometheus), backed by automated integration tests.
- Built aumiqx.com — a programmatic-SEO site of 342 static pages with an interlink engine emitting 1,800+ cross-links/day, auto-deployed 4× daily via GitHub Actions with build-hash verification. Published two zero-dependency open-source libraries (~4–6 KB each).

Independent / Freelance

Remote

Software Engineer — Web & Product (Client Delivery)

2023 – Present

- **NY Elizabeth** — **real-time auction platform**. Built Socket.IO room-per-auction (Redis adapter) for live + timed bidding, tiered bid increments, 1-second bid de-duplication, per-bid audit logging, and rate limiting (30 bids/min) on a hybrid **MongoDB + PostgreSQL / Prisma** stack with Stripe Connect, AWS S3, and a white-label embeddable widget. React / Next.js front.
- **Art Index** — **art-discovery marketplace**. Built an auction-price database proxied from a third-party GraphQL API + Algolia search, live auctions with Stripe, and an admin pricing engine, on Next.js / React + Express / MongoDB.
- **Yoginii** — **multi-vendor wellness platform (primary author)**. Next.js / React with role-based access control, Shopify Admin GraphQL using Metaobjects as a vendor registry, and an HMAC-verified webhook commission engine with per-line-item vendor attribution — tested with Jest + Playwright.
- **air-up (€200M+ D2C brand) & Rockport India** — **Shopify storefronts**. Built multi-region storefront experiences — subscription / replenishment flows, bundle builders, product comparison, INR localization, analytics, and reviews.
- **Beast** — **Cannes Lions-winning studio**. Built a cinematic, media-heavy marketing site solo with video / CDN performance tuning.

KEY PROJECTS

SkillMap — gamified, explorable knowledge-map for learning AI / computer science; Next.js with a custom interactive SVG constellation UI and an LLM-powered tutor. · **job-radar** — open-source job tracker that scrapes listings and uses an LLM to score role fit. · **Prospectra** — autonomous lead-discovery engine; OpenStreetMap data → auto-generated tailored pitch decks (private product — live demo on request). · **@aumiqx/scroll & @aumiqx/gesture** — zero-dependency open-source UI libraries. · More at github.com/rxits.

EDUCATION & QUALIFICATION

Chandigarh University

2021 – 2025

B.E. Computer Science & Engineering

LANGUAGES

English (Fluent), Hindi (Native).
